

Ques) how do we find length of string in java?
Explain with example.

Ans) In java we can find the length of the string using the length() method of the string class. length method returns the number of character including spaces.

```
// int length = s1.length();
```

Ques) how do you compare two strings in java?

Ans) In java we can compare two strings using several methods, depending on how you want to compare them.

- equals()
- equalsIgnoreCase()
- compareTo()
- ==
